Subject: Board Meeting Demo

In case you did not know, there is a board meeting tomorrow (Thursday). Several of you have been working on a presentation for the Board. Since today is the day for testing and refining that presentation it is possible that some of you will be called on to help out. I will explain the presentation so that everyone is up to speed on the demo.

The presentation is to show iCopy (the new Internet Copy machine that Meenal, Alex and Norb have been developing.

All the technology centers around the; project. The index fields are:

1. Hospital
2. Date Created
3. Carrier (as in insurance carrier)
4. Patient Name
5. Patient Number (actually this is an alpha numeric field since some "numbers" have characters in them)
6. Doc Type (standard fields are: EOB, Correspondence, Payment Distribution)

The Demo:

- A person at a bank (or what they call a Lock Box) processes the paper by scanning it using the iCopy.
- A person at the centralized hospital administration office searches for the EOB, and reviews it.

Pretty simple and I think the final preparations will go smoothly today. But just incase, I figured we should all know the plan.
